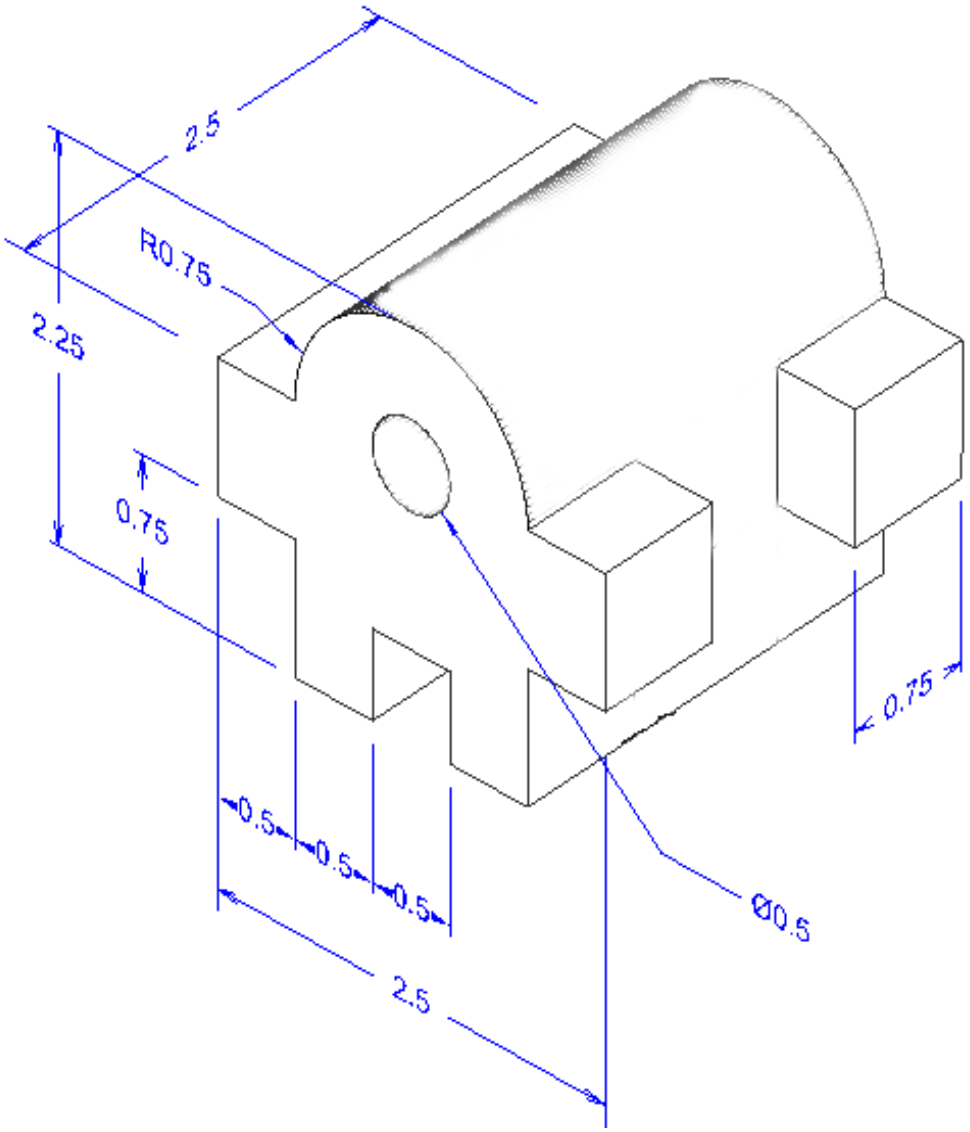
CAD assignment #5

Instructions:
Complete a three-view (orthographic projection) drawing of figure 3-46. Accuracy is your primary objective. Using what you learned about cursor steps and all of the drawing commands, you should be able to draw this object's three main views with 100% accuracy. Remember, use the small cursor steps by holding down the shift key and don't forget commands like "Parallel by Distance"(F2) because they will be very handy in completing this drawing. Below is a 3D view of the object to use as reference

Make sure you include:


- **Front, Right Side, and Top Views with 2 inches between views.**
- **All dimensions as presented in class.**
- **Complete title block**
